

AP Human Geography Summer Assignment

AP Human Geography is not a traditional geography class. Instead of learning about the locations of physical and political features, this course focuses on the interactions between humans and their environment and between human populations. As a prerequisite to the course, AP Human Geography students are expected to enter class with a basic understanding of the physical and political geography of the world - the locations of continents and oceans, the arrangement of regions, and the locations of certain countries found within each of these regions.

Students will identify, review, study, and memorize the locations of the physical and political arrangements for the different continents. Each link contains one blank map but students should feel free to use the map twice if they want to separate physical and political features. Students should be able to pass an assessment of their knowledge of these arrangements during the first few weeks of class. Do not wait until the last week of summer to complete this assignment. Space out the work throughout the course of the summer break. Please email me if you have any trouble accessing the links.

***Students should use their school email to access all links.

North America

- Jamaica
- Canada
- Guatemala
- Haiti
- The United States
- Costa Rica
